ENGR 111
Introduction to Engineering
Class #18

What comes next

Finding the next engineering step before you need it

Zoom protocol

Name Set your Zoom name to your real name, or whatever you'd like me to call you.

Photo Set a professional profile photo.

Camera Encouraged, not required.

Mic Off unless you're speaking.

Your questions, anytime Type in chat or raise your hand, and I'll check periodically. Or just unmute and jump in.

My questions to the class Answer in chat, or unmute and answer.

If you speak Please state your name first.

If I drop out (e.g., my Wi-Fi fails) Stay in the meeting. I'll be back in a few minutes on my phone hotspot.

The calendar

Plan and apply early, because it takes a lot of time to secure a job.

Company internships and co-ops

Many employers recruit student the previous fall.

Many engineering postings run September through January.

Search season often peaks December through February.

Some programs are built for first- and second-year students.

MECOP

Specific Oregon paid co-op program.

Two six-month internships.

Apply as a Clackamas student planning to transfer.

Look at MECOP calendar for dates.

Have a resume finished before fall, then check each path on its own schedule.

Where they are

Use more than one channel, and check on a schedule.

MECOP

two six-month paid internships
apply as a Clackamas student
transfer path: OSU, OIT, PSU, UP
GPA above 2.50

CCC boards

College Central
CCC students pre-registered
employer internships posted here

Companies

career pages
saved searches
check on a schedule

Job fairs

CCC Career Center
university fairs after transfer
bring a finished resume

Conferences

IEEE, ASME, ASCE, SWE
student chapters
student rates
often a career fair attached

Follow

companies
professional societies
student chapters

Check regularly (now you can have you AI do it for you)

Career Center

Resume review. A second reader catches the vague bullet, the missing number, and the layout problem.

Cover-letter review. The Writing Center also does this one-on-one, free.

Job fairs. The Career Center runs them and posts employer internships.

CCC employers. Local postings can be a better first step than a national search board.

careercenter@clackamas.edu 503-594-6001

LinkedIn and your internet presence

LinkedIn

professional photo, plain background

coursework, projects, jobs

follow companies you want

connect with people you meet

Everything else public

search your own name

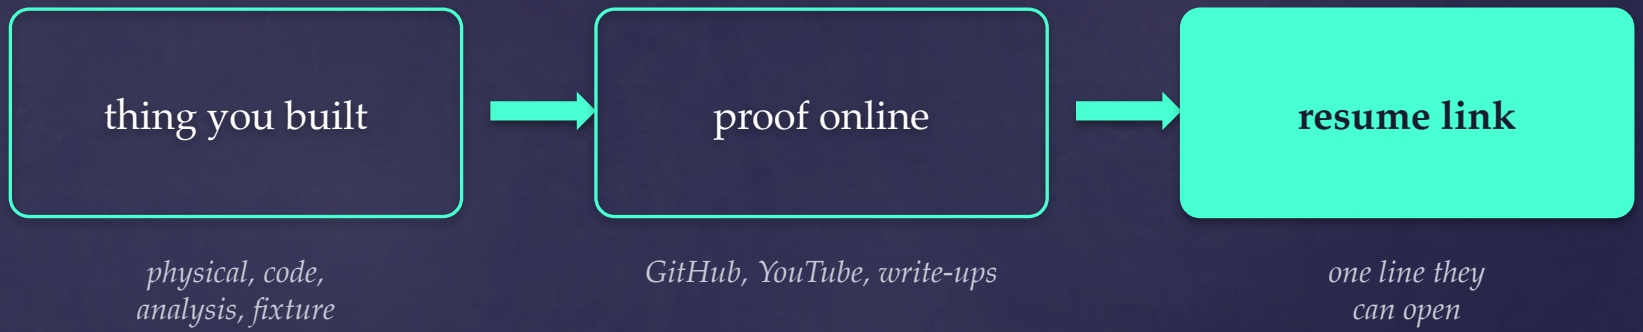

delete weird public posts

lock down accounts that should be private

assume employers look

Clean up the bad presence; make the good presence easy to find.

Build something with value and put it online

Code. GitHub repo, short readme, what it does, how to run it.

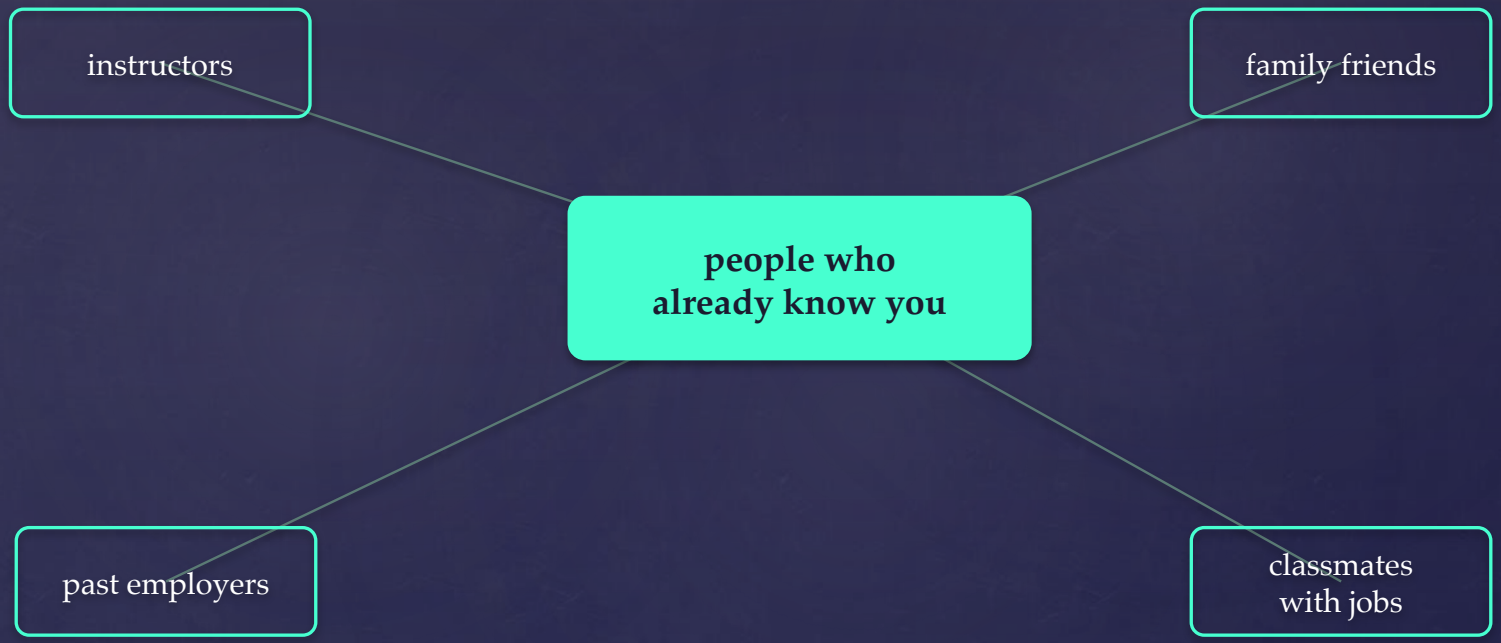

Physical build. YouTube video, photos, or a one-page write-up.

Analysis. A clean figure, data file, and explanation of the decision it supports.

Put the link on your resume.
What other places online can you showcase your work?

Ask the people who already know you

Referrals and references

Tell them what you want and when. Specific beats vague.
Ask whether anyone they know works there. You are looking for a real connection, not a cold script.
Follow up a few weeks later. People forget. That is normal.

Quarterly Journal of Economics; Journal of Labor Economics.

Resume and cover letter

Different documents, different jobs.

Resume

what you have done

bullets, not sentences

one page

tuned for the job

gets you the interview

Cover letter

why this job

why this company

three or four short paragraphs

one employer

connects the dots

Save your resume as a PDF with a clean name

What goes on yours now

Early resumes are evidence of responsibility and momentum.

Section	What belongs there now
Pitch	one line: what kind of engineering student you are
Education	near the top for now
Experience	any job counts; describe responsibility and results
Projects	class, personal, volunteer, work; include links
Leadership / awards	teams, clubs, scholarships, service, ham radio
Skills	software, tools, lab methods you actually used

Start every bullet with a verb. Designed, built, tested, measured.
Put a number on it where you can. Hours, dollars, parts, people, tests, percentage, distance.
No references line. It is outdated and wastes space.

Interviews

Behavioral

STAR form

Technical

exam-style problem

whiteboard explanation

sometimes code

show how you think

Try this: Use AI voice mode (you want to TALK out loud) to prep for a job for multiple hours every day for a week before the interview and ask it help you memorize and understand the key technical information you may need to know for that specific job and may be asked for in the interview.

Beforehand. Read the job description, find where you match, and look up what the company actually makes.

Prepare. Have three STAR stories ready.

Practice out loud. Input into AI your resume and the job posting and any other relevant information. Then use AI in voice mode to ask you interview questions and refine your answers and knowledge of the company.

After the bachelor's

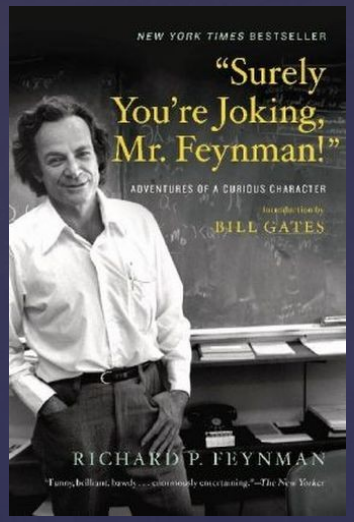

These ranges are wide. Look up your own program.

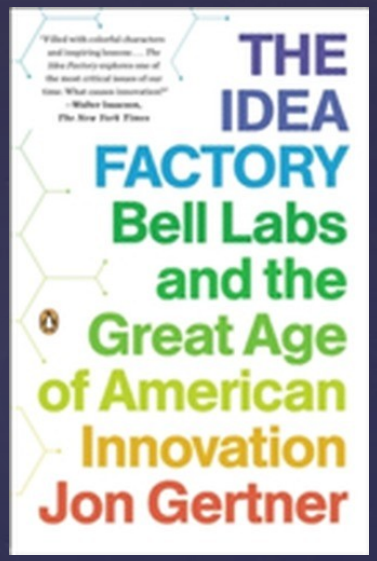

Degree	Time	Cost	Leads to
M.Eng	1-2 yr	~$12.6k/yr public in-state, ~$28k private	higher salary, management
M.S.	1.5-2.5 yr	often covered by an assistantship	research, more responsibility
Ph.D.	5-6 yr	usually funded: tuition waived plus $30-41k/yr	university teaching, research
M.D.	4 yr + residency	$298k public, $408k private	medicine
M.B.A.	2 yr	$26k to $200k+ total	management, entrepreneurship, sales
J.D.	3 yr	~$31k/yr public in-state to ~$57k/yr private	patent, environmental, technical law

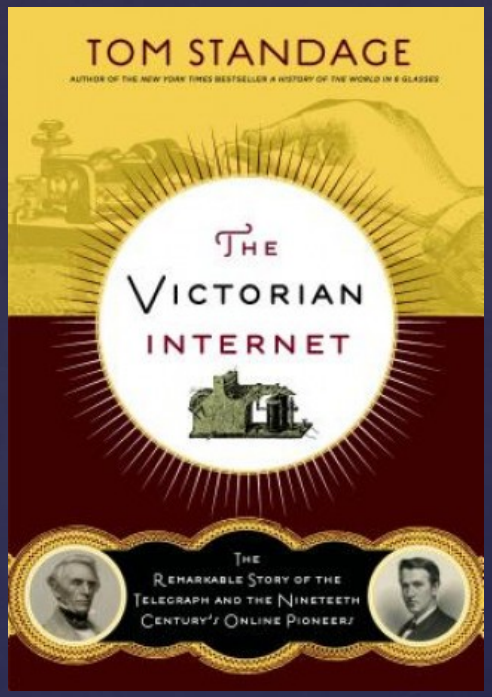

AAMC, ABA, NCES, NSF.

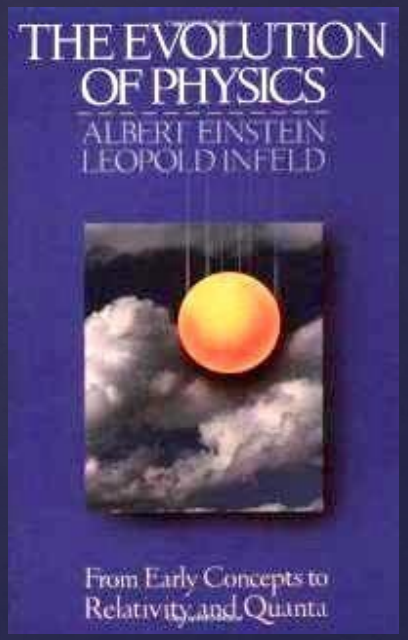

Start with the career you want, then work backward to the credential.

Read quality stuff…

What books do you recommend?
